

July 26, 2021

Honorable Ron Wyden  
Chairman  
Committee on Finance  
U.S. Senate  
Washington, DC 20510

Honorable Mike Crapo  
Ranking Member  
Committee on Finance  
U.S. Senate  
Washington, DC 20510

Honorable Richard Neal  
Chairman  
Committee on Ways and Means  
U.S. House of Representatives  
Washington, DC 20515

Honorable Kevin Brady  
Ranking Member  
Committee on Ways and Means  
U.S. House of Representatives  
Washington, DC 20515

RE: Internal Revenue Code Section 25C Tax Incentive for Homeowner Energy Efficiency Improvements

Dear Chairman Wyden, Ranking Member Crapo, Chairman Neal and Ranking Member Brady:

As you begin to finalize your work on a tax package for this Congress, we urge you to expand the 25C tax incentive and increase the value of the credit to at least \$1,500 without limitation on qualified energy property. As a coalition of energy efficiency leaders, including businesses that manufacture or install insulation, heating and cooling products, water heating, windows, and doors, we represent business interests and energy efficiency leadership in nearly every state in the Union.

We thank you for your leadership on energy efficiency tax incentives, and greatly appreciate current proposals to make 25C a permanent and annual credit, with an increase in the credit amount. When properly configured, the 25C tax credit will spur investments that will help decarbonize our nation's residential building stock, put money in the pocket of homeowners through lower utility bills, and create jobs in communities throughout the country.

We look forward to working with the tax-writing committees as you develop a legislative infrastructure package aimed at meeting the demands of climate change and rebuilding from a

pandemic that eliminated more than 300,000 energy efficiency jobs in 2020. As those efforts proceed, we highlight several key components for reforming the 25C investment tax credit:

1. **Eliminate the lifetime cap and establish an annual cap.** The lifetime cap of 25C has chilled homeowner use of the credit and has prevented related owner-occupied markets from making 25C and energy efficiency an integral part of existing single-family homeownership. Establishing an annual cap would help develop and sustain owner-occupied energy efficiency penetration, resulting in significant carbon reductions, in addition to producing meaningful consumer energy savings.
2. **Increase the value of the credit to at least \$1,500 without limitations on qualified energy property.** The current \$500 credit is too low to incentivize large-scale homeowner action on energy efficiency. Raising the credit amount to at least \$1,500, without dollar limitations on specific qualified energy property, will simplify the incentive and spur retrofit energy efficiency improvements at a scale necessary to meet ambitious carbon reduction goals.
3. **Increase the 25C tax credit from 10% to 30%.** Combined with an increase in the credit amount, a raise in the percentage of eligible improvements will provide a powerful incentive for homeowners to make costly, discretionary home energy efficiency retrofits.
4. **Provide a long-term extension of the 25C tax credit.** Making the credit permanent or providing a long-term extension for multiple years will provide market certainty for manufacturers, distributors, contractors, installers, and consumers in making long-term, substantial investment decisions.
5. **Ensure that materials and labor qualify as eligible expenses.** The installation process is a considerable portion of an energy efficiency retrofit project. Both material and labor should be covered by the credit.

Modernizing the 25C tax credit will put Americans to work improving the efficiency of our homes, improve housing affordability through lower utility bills, and cost-effectively reduce carbon emissions. We urge you to prioritize this important incentive as you develop infrastructure and clean energy legislation this Congress.

Sincerely,
